Freesbe

ENTERPRISE

PRIVATE INSTANCE

Your own Freesbe. Nobody else's.

Chat, meetings and a phone system on a copy of Freesbe that runs for your organization alone, in the region you choose.

Your own instance

Its own database, storage and sign-in. Shared with no one.

Your region

Everything kept in the EU or the US. You choose.

Your rules

Your address, your identity provider, your AI settings.

freesbe.net/enterprise

(888) 860-1070

Choose how private you need it.

Every option is the same Freesbe your people already know, with the same apps on desktop, web and phone. What changes is how much of it is yours alone.

LEVEL 1

Dedicated data

For teams that mainly need to know where their data lives.

- Your own file storage and database, in the EU or the US
- Files encrypted with a key you hold and can revoke
- A call server set aside for your meetings and calls

LEVEL 2 · RECOMMENDED

Private instance

Your own copy of Freesbe, run for you alone.

- Everything in Dedicated data
- Its own app, database, storage and sign-in directory
- Your own address, like chat.northwind.example
- Sign-in only through your identity provider
- Your own phone system, numbers and call records
- 99.9% uptime commitment

LEVEL 3

Isolated deployment

For regulated organizations and public bodies.

- Everything in Private instance, in a hosting account of its own
- Two call servers in your region, for failover
- Updates a week after everyone else, on a schedule you can see
- A yearly penetration test summary and a 99.95% uptime commitment

Every level includes

Chat and channels	Huddles and meetings	Phone system	Recordings and transcripts
Admin Center	Audit log	Single sign-on	A named contact

Your data stays yours, and stays put.

With a private instance, everything your organization creates stays in the region you pick, including the accounts people sign in with.

Kept in your region

EU or US, guaranteed

- Messages, threads and search
- Accounts, sign-in and members
- Meeting and call audio and video
- Files, recordings and transcripts
- Workspace settings and audit log
- Logs and backups

Sign in your way

People sign in only through your identity provider, with SAML or OIDC. Remove someone there and they lose access here too.

Your keys

Files are encrypted with a key you control. Revoke it and the files can no longer be read.

Calls stay on our servers

Calls never go peer to peer. Audio and video pass through call servers set aside for you, in your region.

AI on your terms

Turn AI off for everyone, or keep it to a provider that processes data in your region.

See everything

The Admin Center shows every sign-in, admin change and message log, ready to export.

Leave cleanly

Take a full export at any time. When you leave, the whole instance is deleted and we confirm it in writing.

For your security review: our ISO/IEC 27001 certificate, data processing agreement, uptime commitment, security questionnaire answers and architecture overview, sent on request.

From first call to your own instance.

1

Talk to us

Tell us how many people, which region, and what your security team needs. We'll recommend a level and walk you through a demo.

2

Security review

We answer your questionnaire and send the data processing agreement, uptime commitment and architecture overview.

3

Your instance goes live

It's set up automatically in your region, at your own address, and connected to your identity provider. Bring your history with you: Slack imports are included.

4

Always up to date

Every new feature reaches your instance after it has passed our tests, with no upgrade project on your side.

Built for

- Law and accounting firms
- Healthcare groups and insurers
- Public bodies and schools
- Companies with EU data rules

Pricing

Enterprise seats for your people, plus a yearly platform fee for the level you choose. One contract, billed by invoice.

Ask for a private instance

Tell us your size and region, and we'll take it from there.
